| Analyte description  | Albumin normally constitutes about 60 % of human plasma proteins and is<br>produced in the liver. It is important in regulating blood volume by<br>maintaining the oncotic pressure. It also serves as carrier for molecules of<br>low water solubility, including lipid soluble hormones, bile salts,<br>unconjugated bilirubin, free fatty acids, and drugs. Low albumin<br>(hypoalbuminemia) may be caused by liver disease, nephrotic syndrome,<br>burns, protein-losing enteropathy, malabsorption, malnutrition, late<br>pregnancy, genetic variations and malignancy. High albumin<br>(hyperalbuminemia) is almost always caused by dehydration. |  |  |  |
